SUMMARY

Data Engineer with hands-on experience building reliable Python and SQL data pipelines, backend services, and automation for analytics and business workflows. Skilled in ETL, data validation, reconciliation, API integration, query optimization, and transforming operational inputs into structured KPIs, reporting, and dependable downstream outputs. Brings a practical applied-AI mindset: use the right tool, make the workflow observable, and keep the solution maintainable.

EDUCATION

Sarvajanik College of Engineering and Technology — *Surat, India*
Bachelor of Engineering in Computer Engineering; CGPA: 8.00 — *Oct 2020 - May 2024*

EXPERIENCE

ParallelDots — *Remote*
Data Engineer — *Jun 2026 - Present*

- Build retail analytics workflows that transform image-annotation data into structured KPIs and insights for downstream business use.
- Develop Python and SQL data pipelines and ETL workflows across Databricks, PostgreSQL, ClickHouse, and MongoDB.
- Support backend/API integrations and reliable data delivery from operational inputs to analytics outputs.
- Organize, validate, and operationalize data so analytics outputs are consistent, usable, and traceable.

NJ Mutual Fund — *Surat, India*
Python Engineer — *Jun 2024 - May 2026*

- Designed and developed FastAPI and Flask backend services for analytics platforms, reporting systems, and internal automation workflows.
- Reduced manual processing by 60% through validation-first ETL, reconciliation, and workflow automation.
- Implemented idempotent reconciliation and audit workflows with retry logic, structured logging, and automated email notifications.
- Migrated Excel-driven processes into scalable Python and SQL pipelines, improving data consistency and operational reliability.
- Improved reporting performance by 50% and reduced data-retrieval latency by 40% through SQL, indexing, and backend optimization.

NJ Mutual Fund — *Surat, India*
Data Science Intern — *Jan 2024 - Jun 2024*

- Developed backend data models and API endpoints supporting sales and performance-analytics dashboards.
- Automated recurring Excel-based reports using Python and SQL, improving accuracy and reducing manual effort.
- Improved data-ingestion and processing workflows through SQL tuning and schema optimization.

PROJECTS

Online Payment Fraud Detection | *Python, FastAPI, XGBoost, Docker*

- Built an end-to-end fraud-detection pipeline using a 6.3M+ transaction dataset, feature engineering, XGBoost, Logistic Regression, and a FastAPI prediction service.
- Handled extreme class imbalance and produced a containerized service for real-time transaction scoring; repository reports ROC-AUC of about 0.96.

ESG Performance Analysis | *Python, Pandas, Statistics*

- Analyzed ESG scores against historical market performance through regression, risk analysis, and Monte Carlo simulation.
- Built an analysis workflow covering data preparation, returns, correlation, regression, and Value-at-Risk exploration.

DSA Tracker | *React, TypeScript, Vite, Gemini*

- Built an interactive learning tool for data structures and algorithms with a modern TypeScript frontend and Gemini integration.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript
Backend: FastAPI, Flask, REST APIs, Pydantic, asynchronous Python, backend/API integrations
Data Engineering: ETL/ELT, data validation, reconciliation, batch processing, scheduling, data quality, Databricks
Databases: PostgreSQL, ClickHouse, MongoDB, MySQL, Oracle SQL, BigQuery, stored procedures, query optimization
Analytics / ML: Pandas, NumPy, scikit-learn, XGBoost, experiment evaluation
Applied AI: practical AI integrations, LangChain, RAG, FAISS
Tools: Docker, Git, GitHub Actions, Linux, pytest, Plotly, AgGrid

CERTIFICATIONS

Oracle Cloud Infrastructure Certified Data Science Professional
Issued 2025
